PLEASE TOUCH! CLIMBING EAR BY CONCRETE® YOUNG

Climbing walls are pieces of both sports and playground equipment. But they are much more than this. Their most important task is to make sports and exercise fun. As many climbing elements are used in public areas their design has to meet high demands.

The Climbing Ear by Concrete® unites shape and function in a particularly appealing way. Its sculptural appearance is placing outstanding emphasis wherever it will be set up; and it is a lasting eye-catcher for children and adults alike.

Skate Parks

SKATE PARK ZWICKAU (GER)

Yet another »concrete gem« is now brightening up Saxony's skating landscape – much to the delight of the local BMX riders and skateboarders. At the beginning of 2007 the provisions were kicked-off followed by months of designing and coordinating, and talks with the city council and the respective authorities in charge.

And in 2009 the real work began: a local architectural office was awarded with the overall

planning of integrating Concrete's conceptual design into the landscape. As you can see today their work is a success!

The park's highlight, however, certainly is the curved wallride that is unique in the German skating landscape. And this is the reason why so many BMX riders and skaters from all over Saxony turned up to ride and skate this park.

⑤ Skate Parks

SKATE PARK HEMER (GER)

On 17 April the gates to the magic of transformation opened at the regional flower show in Hemer. A skate park that had been worked out, designed and executed in an exemplary way had been created here by the planning office Geskes & Hack from Berlin in cooperation with DSGN-concepts. Based on a design workshop with the local skaters it was known what kind of park it should become. This street plaza park was therefore implemented with various steps, curbs, rails and banks which are distributed

throughout several levels within the park. In the narrowest and deepest part there is the beginner's area with a size of 400 sqm so that the skaters can make an attempt to their first tricks with some curves and kick-turns. The kidney pool in the middle is thus integrated into the surrounding street area. Geskes & Hack, the overall planning office, conceptually designed the skate park's integration and the open spaces by picking up the subject of plants and rocks as the skate park is located in a sea of rocks, the

so-called Hemeraner Felsenmeer. Owing to its combined design of precast concrete ramps with plants, trees, rocks, an individual »starter place« and a kidney pool this skate park is unique in Germany as yet. Skating in a naturally designed landscape, in the woods on a hill overlooking Hemer, simply provides a dreamlike ambience.

For regular updates on new parks or elements please see our **newsletter** at www.concrete-skateparks.com

SKATE PARK EMSDETEN (GER)

After an intensive planning phase of 2 years the ground-breaking ceremony for the skate park in the premises of the old sewage treatment plant of Emsdetten took place on 12 May. During various workshops with the city council and its youth representatives a skate park according to the wishes and ideas of the youth was created in cooperation with DSGN-concepts.

The park's design is embedded into the landscape and offers a huge selection of trick options due to its urban street obstacles on various levels.

S Skate Parks

SKATE PARK HARDENBERG (NL)

A new skate park was installed in Hardenberg, in Holland's north-east. In cooperation with 2MOVE (Concrete[®] representative in the Netherlands) local skaters worked on a preliminary design. Under the guidance of the Design Team Concrete[®] and Erwin Riesebos (Skate Park Designer) these ideas were brought to perfection and worked out in detail. And in the summer of 2010, this park was installed. In the meantime, many international skaters already visited this park. They judged it as »extraordinary«.

CLIMBING STONES RIO SECO (PT)

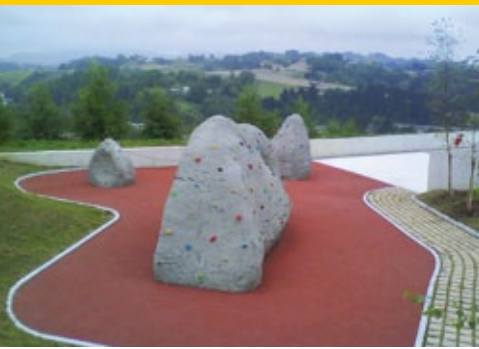

Located in one of the oldest parishes of the municipality of Lisbon, the village Ajuda, the Urban Park of Rio Seco was installed on the premises of the old Cal factory. Headed by landscape architect Cristina Duarte, Lisbon's City Council was in charge of this area's retrieval. The Concrete[®] STONE climbing element has an attractive shape and is harmoniously integrated into the existing organic environment. That way it is a unique place for children's recreational activities.

CLIMBING STONES IN PAGOLA (ES)

This park was installed in the surroundings of Pagola, a district of Donosti (that is the Basque name of San Sebastian). It is located in an area that is crazy for sport, and was carefully planned and executed. The park is surrounded by schools, pedestrian zones and cycle tracks and is thus the centre and recreational spot for a new residential area.

The project's architects are ESTUDIO DE ARQUITECTURA URGARI from Donosti.

COLOURS FOR CHEMNITZ (GER)

At the outskirts of Chemnitz there is an area that is quite unattractive as a residential area. For this reason development has now been reduced. In order not to produce pure waste land, a project with an architectural emphasis was created.

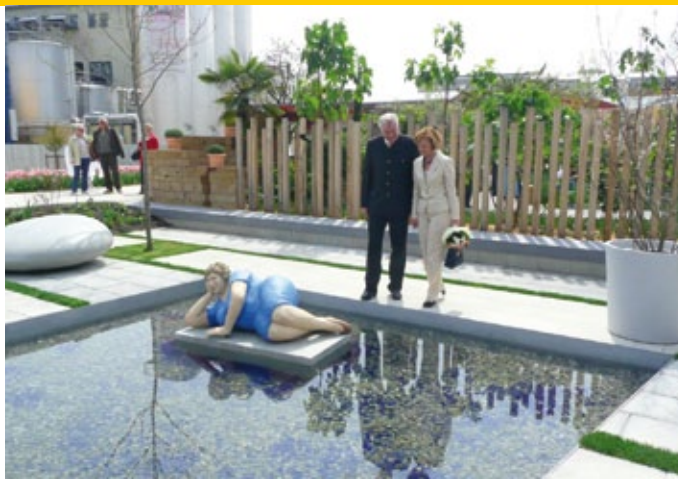

As a result, a facility was created with great efforts in both, landscaping and also with regard to the quantity and quality of the playground elements. It is a real hotspot for the neighbourhood.

A hybrid of sports ground, meeting point for teenagers and playground was created which was well accepted by the children and teenagers from the neighbourhood. The varied climbing options are, of course, a highlight. They offer both, stimulation for the young mountaineers to try climbing, and demanding and varied climbing fun for the advanced climbers. They are also effectively completing the picture architecturally and visually.

Prominent visitors at the regional horticultural show in Rosenheim (GER)

REGIONAL HORTICULTURAL SHOW IN ROSENHEIM 2010 (GER)

An impressive and successful garden festival has come to an end. During the 164 days the horticultural show hosted many visitors and offered a versatile programme.

Themed »Perspectives of concrete«, innovative ideas on the subject of concrete were presented in one of the theme gardens. With our exhibits we were able to show the many possibilities of concrete. Therefore visitors could see the perfectly designed benches and pebble-shaped sitting elements from our Urban Design product line.

STONES S'HERTOGENBOSCH (NL)

Within the scope of restyling several parks the municipality of s'Hertogenbosch decided to go for the Concrete® sitting stones.

These stones shall not only invite people to sit and climb on them, but they should also serve as an eye-catcher. In the meantime three of s'Hertogenbosch's parks have been equipped with our stones and there are more to come.
